EDUCATION

M.S. Cybersecurity

Rochester Institute of Technology – 3.88/4

Rochester, August 2023–December 2025

B.Tech Information Technology

Easwari Engineering College – 9.21/10

India, June 2019– May 2023

EXPERIENCE

Cybersecurity Intern

Hacktify Cyber Security

Remote, February 2025 – March 2025

- Identified and exploited 20+ web vulnerabilities (XSS, IDOR, SQLi) in simulated environments, improving vulnerability management workflows.
- Authored 4 detailed vulnerability reports containing proof-of-concept evidence, and prioritized, actionable remediation steps for timely mitigation.
- Collaborated in a team-based Capture-the-Flag event, demonstrating applied cybersecurity skills in simulated vulnerability labs with 95% accuracy.

Cybersecurity Intern (CyberVSR)

Rochester Institute of Technology

Rochester, May 2023 – July 2023

- Triageed 500+ SOC alerts using Wazuh and Splunk, identifying true positives, escalating high-severity incidents, and reducing false positives.
- Utilized open-source AI to support incident analysis, alert correlation, and IOC validation, improving root-cause analysis time by ~30%.
- Integrated LLM APIs to automate incident summarization, severity estimation, and response feasibility, reducing analyst review time by ~25%.
- Documented 20+ security incidents, mapping techniques to MITRE ATT&CK and delivering actionable remediation recommendations.

PROJECTS

Lightweight Cross-Platform File Encryption and Performance Analysis in AWS Cloud

- Led a 3-member team to develop a cross-platform tool using AES-GCM, ChaCha20, and AES-SHA2, compatible on Windows and Linux systems.
- Deployed and tested the application on AWS cloud infrastructure, executing 100+ encryption benchmarks to evaluate algorithm performance.
- Conducted performance testing across multiple file sizes (1MB–1GB), measuring encryption time, CPU utilization, memory usage, and CPU temperature to assess resource impact.
- Compared encryption algorithms and identified up to ~15% performance variation, documenting results to guide efficient deployment decisions.

CTI Triage Automation Tool

Independent Project • github.com/SidhuK007/ctitool

- Built a Python-based CTI triage CLI to enrich and analyze IPs, domains, and file hashes using multiple threat intelligence sources (VirusTotal, RDAP, Shodan, Censys, Crtsh, Ipinfo, Ipapi, HybridAnalysis).
- Automated indicator enrichment and normalization, reducing manual SOC L1 lookup time by ~50%.
- Implemented risk scoring, caching, and colorized terminal output to accelerate alert triage and improve analyst readability by 30%.

Honeypot with Real-Time Log Analysis Using ELK Stack

Independent Project • github.com/SidhuK007/ELK-stack-ansible

- Captured and analyzed 1,000+ unauthorized SSH/Telnet access attempts by deploying a Cowrie honeypot on a hardened Linux environment.
- Automated deployment via Ansible, reducing manual configuration time by 80%.
- Integrated Filebeat + ELK for real-time log ingestion, detection, and alert visualization.

Network Monitoring Tool – Python

Independent Project • github.com/SidhuK007/netmon-python

- Developed a lightweight, modular network monitoring CLI with 5 core features (ARP scan/TCP scan/Web Crawler/MAC changer/Listener Detection).
- Integrated listener detection using psutil, analyzing 100+ active sockets, finding potential suspicious listeners with automated heuristics.
- Added structured reporting to support SOC analysis and designed a safe-by-default architecture, ensuring non-invasive functionality.

SKILLS AND CERTIFICATIONS

Security Domains SIEM Integration, Vulnerability Assessment, Incident Response, Security Operations Center, Alert Triage, Log Analysis, Event Correlation, Threat Detection, Phishing Analysis, Endpoint Security, Email Security, IAM, Zero Trust, Data Loss Prevention, Security Monitoring, Cloud Security, Network & Enterprise Security, Social Engineering, OSINT, Firewall, IDS, IPS.

Languages & Operating Systems: Python, C/C++, Bash, Windows, Windows Server 2019/2012, Linux (Ubuntu, Kali).

Tools & Frameworks: Splunk, Wazuh, ELK, Microsoft Defender for Endpoint, Microsoft Sentinel, EDR/XDR, KQL, Ticketing Systems, Incident Playbooks, Threat Intelligence Feeds, AWS Console, Ansible, Metasploit, Burp Suite, Wireshark, NIST SP 800, NIST CSE, MITRE ATT&CK, OWASP Top 10, SOAR.

Certifications: SOC Level 1, Google Network Security Specialization, AWS Security Specialty(Udemy).
